[H] Circular protective cap

[I] Disconnect cover

Consult pump manufacturer’s instructions for use when connecting infusion set to the insulin pump.

Fill the empty space in the cannula with the following prime:

- U-100 insulin
  0.7 u (0.007 ml)
Indications for use:
The comfort™ short infusion set is indicated for subcutaneous infusion of medication, including insulin, administered by an external pump.

CONTRAINDICATIONS: comfort™ short is neither intended nor indicated for use with blood or blood products (I.V. infusion).

WARNINGS
■ The comfort™ short infusion set is only sterile and non-pyrogenic if the packaging is unopened and undamaged. Do not use if the packaging is already open or is damaged.
■ Go through instructions for use carefully before inserting comfort™ short, as failure to follow instructions may result in pain or injury.
■ Inaccurate medication delivery, infection and/or site irritation may result from improper insertion and maintenance of infusion site.
■ When using comfort™ short for the first time, do so in the presence of a healthcare provider.
■ comfort™ short is a single-use item, which must be disposed of after usage. Do not clean or re-sterilise.
■ Be sure that the needle guard is removed before insertion.
■ Do not re-insert introducer needle into infusion set. Re-insertion could cause tearing of soft cannula which would result in unpredictable medication flow.
■ Never prime the infusion set or attempt to free a clogged tubing while set is inserted. You may accidentally inject too much medication.
■ Use aseptic techniques when temporarily disconnecting comfort™ short, and seal the cannula housing with the cover provided. Consult with healthcare provider on how to compensate for missed medication when disconnected.
■ Protect comfort™ short from direct sunlight. Store at room temperature.
■ If infusing insulin, and blood glucose level becomes unexplainably high, or occlusion alarm occurs, check for clogs and leaks. If in doubt, change infusion set since soft cannula could be dislodged, crimped or partially clogged. Discuss plan for rapid replacement of insulin with healthcare provider should any of these problems arise. Test blood glucose level to make sure problem is corrected.
■ Check the blood glucose level 1-2 hours after introducing comfort™ short and check the place of infusion several times a day, and measure your blood glucose regularly.
■ If infusing insulin, do not change infusion set just prior to bedtime, unless blood glucose can be checked 1-2 hours after insertion.
